Among the most popular documents are PDFs. They offer a high degree of protection and ensure data is secure from any potential corruption. While these documents can be generated in several ways, one way is to transfer data from various source spreadsheet files. BulkPDF aims to do just that, by providing users with a solution to migrating data selectively from source spreadsheet files. Transfer data from spreadsheets to PDFs Migrating information is performed in a highly intuitive manner, as a wizard guides newcomers through all the necessary steps to transfer data to PDFs. This sequential layout ensures the application is very accessible and one does not end

up with corrupted files. Source spreadsheets can be in any of the standard formats, i.e. XLS, XLSX, or ODC and once a target source document has been designated, the application automatically parses the file and displays the available rows, columns, and tables. These entries will provide the data for all information migration processes. Requires PDFs with a specific internal structure The next step involves selecting the destination PDF target. It should be noted that a certain internal layout is required for the tool to correlate fields. If such a setup is available, then the utility automatically displays the available fields and transferring data simply requires that users correlate source XLS columns data with destination PDF fields. One

noteworthy feature is the ability to selectively discard information from the processing queue. For example, one can choose to migrate only several columns of data from source spreadsheets. This eliminates the need for an external tool to edit source documents. Once satisfied with their correlations, users are free to name their new files, as each linkage generates a new PDF; for this purpose, a batch rename function is available for use. The general impression left by this tool is that of a basic XLS to PDF data migration tool, with options for batch renaming output files In conclusion, BulkPDF is a simple tool for migrating data from XLS to PDF documents. It is potentially very useful, but the requirement for a specific internal PDF structure does tend to blemish its

otherwise good scorecard. $12.99 5969 BulkPDF Description: Among the most popular documents are PDFs. They offer a high degree of protection and ensure data is secure from any potential corruption. Converting a number of.xlsx or.ods files into a single.pdf file One of the easiest ways to transfer data from your source spreadsheets to your target PDF is to download and use BulkPDF. This application is a free tool that helps users to convert multiple.xlsx or.ods files into a single.pdf file without much hassle. It

is really a good tool for those people who transfer data from spreadsheets to PDF for various reasons. You can use this tool to have a backup of important data files. Also, it allows users to avoid losing data if there is any problem during the conversion process. It should be noted that the software is an easy-to-use utility, and once you have found the application of your choice, you can start the migration process. To make sure everything runs smoothly, you should ensure that you have formatted the file properly. The software will help you to migrate all the data from your source spreadsheets to the target PDF document. The source spreadsheets can be in any of the standard formats, i.e. XLS, XLSX, and ODC and once a target source document has been designated,

the application automatically parses the file and displays the available rows, columns, and tables. These entries will provide the data for all information migration processes. Users can select the type of target file to be produced. Selecting the format from the list provides the list of possible formats. After picking the format, BulkPDF will show you the formats that match the selected one. This process will help you to get the appropriate format for your target file. After selecting the format, BulkPDF will start to show you the details about the output file. If you do not want to save the result in the same folder as the input files, you will have to provide the source folder location and give the file a name to produce. The software provides you with a preview

before you proceed with the last step. You can also choose to discard some of the data in your PDF file from the tool. Once the input process is complete, the software will give you a list of documents that were processed successfully. To view the complete list of documents, you will need to select them. This is very easy to do because BulkPDF will ask you to choose the number of PDF documents to be displayed. You can choose one or a few documents at a time. You can also batch rename your new PDF documents. If you have already created PDFs using this software, it is easy for you to batch rename them. You will have to define the extension of your new file. After selecting the extension, you can also name your new file with the help of BulkPDF. The software also

allows you to choose whether you want to delete the old files or not. Converting a number of.xlsx or.ods files into a single.pdf file BulkPDF is a free
