You'll find a full suite of adjustments, including the most recent additions like Photoshop FX and Creative Sharpening. The biggest change is in the Filters category. The new Comfort Edge filter lets you make adjustments to the image edges to produce a very professional looking image ready for plates or ads. I'm certainly not the first one to notice that the strength of the sharpening now appears to be independent of the Amount setting. For example, if you set Amount to 100%, it will now be much stronger than just setting it to 50%. I can assure you however that it's still strongest when you set Amount to 100% and Amount to 50%. Some people might appreciate the setting an Amount of 10-60% and then adjusting Comfort Edge Amount to 0-10%, depending on whether they want more or less of the effect. Either way, from what I've seen, their results should be essentially the same. You can also apply this filter in a Layer Mask to make adjustments to an object only to the edges around it. The high-quality DNG to JPG conversion feature lets you easily save images as JPGs without requiring an additional Lightroom copy. One-click crop and straighten are new features, too. Along with the new smart cropping, you'll also find in-canvas retouching. This includes the usual skin softening and luminosity adjustments, as well as various brush presets to customize. If you don't see quite what you want, you can always use the quick-fix button. If you know where to look, it's quite easy to do touchups in your image. After some color corrections, I noticed small areas where the contrast looked off and perhaps this was the result of a bug or a tiny adjustment I had made. Custom Gradient presets are great for not only gradients, but also for creating backgrounds and textures. You'll also find Content Aware Fill for replacing objects that you want to keep in an image. You can also create custom Presets and apply them in real time. You'll find an updated Effects panel and you can combine Effects with filters from the Good Edit panel. To sum up the main differences, Adobe has changed the image editing functionality and, in my opinion, it works very well. The one large issue I've seen is that the Performance menu has a Check box for "Consider system memory for compressed image data." I have no idea whether this makes any sense at all, but it seemed like a waste of memory to set it to On. I'll leave it on the default Off configuration. Viewing an image in Quick View and setting it to a specific size - say, 2 megapixels - is now much more efficient. Finally, if you're using Lightroom or Adobe Camera Raw, you can now work on your images while you're offline. Here's some networking troubleshooting advice: make sure you're not running on a proxy.
