This allows you to share virtual trips with friends and family. When Lightroom 3's "Making adjustments" panel first appeared in 2007, art directors around the world considered it an unsolvable problem. But software engineers ultimately figured out how to do it: they layered four different adjustments on top of an image, creating a clipping layer that could be edited like any other layer. Then a new panel appeared that let you reveal and adjust all relevant layers at once.

The original texture can be applied to layers or the entire image. The border can be used to outline an object.
